

ACTUAL SIZE

The IndustryIQ range of radio remote controls is designed for the wireless remote control of lighting, access and security systems, gates and doors, and many other applications*.

These highly-engineered systems are available with a number of different transmitter and receiver styles, all of which use highly secure rolling-code encryption. All transmitters are factory-encoded with a unique serial number, negating the need for DIP switches.

The various transmitter and receiver styles can be intermixed, and a receiver may be programmed to respond to many transmitters using a simple teach-in method. Alternatively, a single transmitter can be used to control multiple receivers - e.g. each button causes a different receiver, or all receivers, to respond.

The systems operate reliably up to 100m, and an external antenna may be added to the receivers for demanding applications.

* These remote controls are not intended for use in safety applications - in those instances, use our Autec range of safety remote controls. Contact us for further details.

Transmitters

Mini - 2 button

Standard - 2 button
- 4 button

Wall mounted - 4 button

Receivers

Standard: 12/24 V AC/DC
- 2 programmable relays
- IP30

External: 12/24 V AC/DC
- 4 output relays
- 1 momentary / latching
- IP65

Mains Powered:
- 4 programmable relays
- IP44

- ✓ High Security Rolling Code
- ✓ License-free
- ✓ No DIP switches
- ✓ Teach-in Operation
- ✓ Range 100m nominal
